UX Proposal for our Mobile Ecosystem

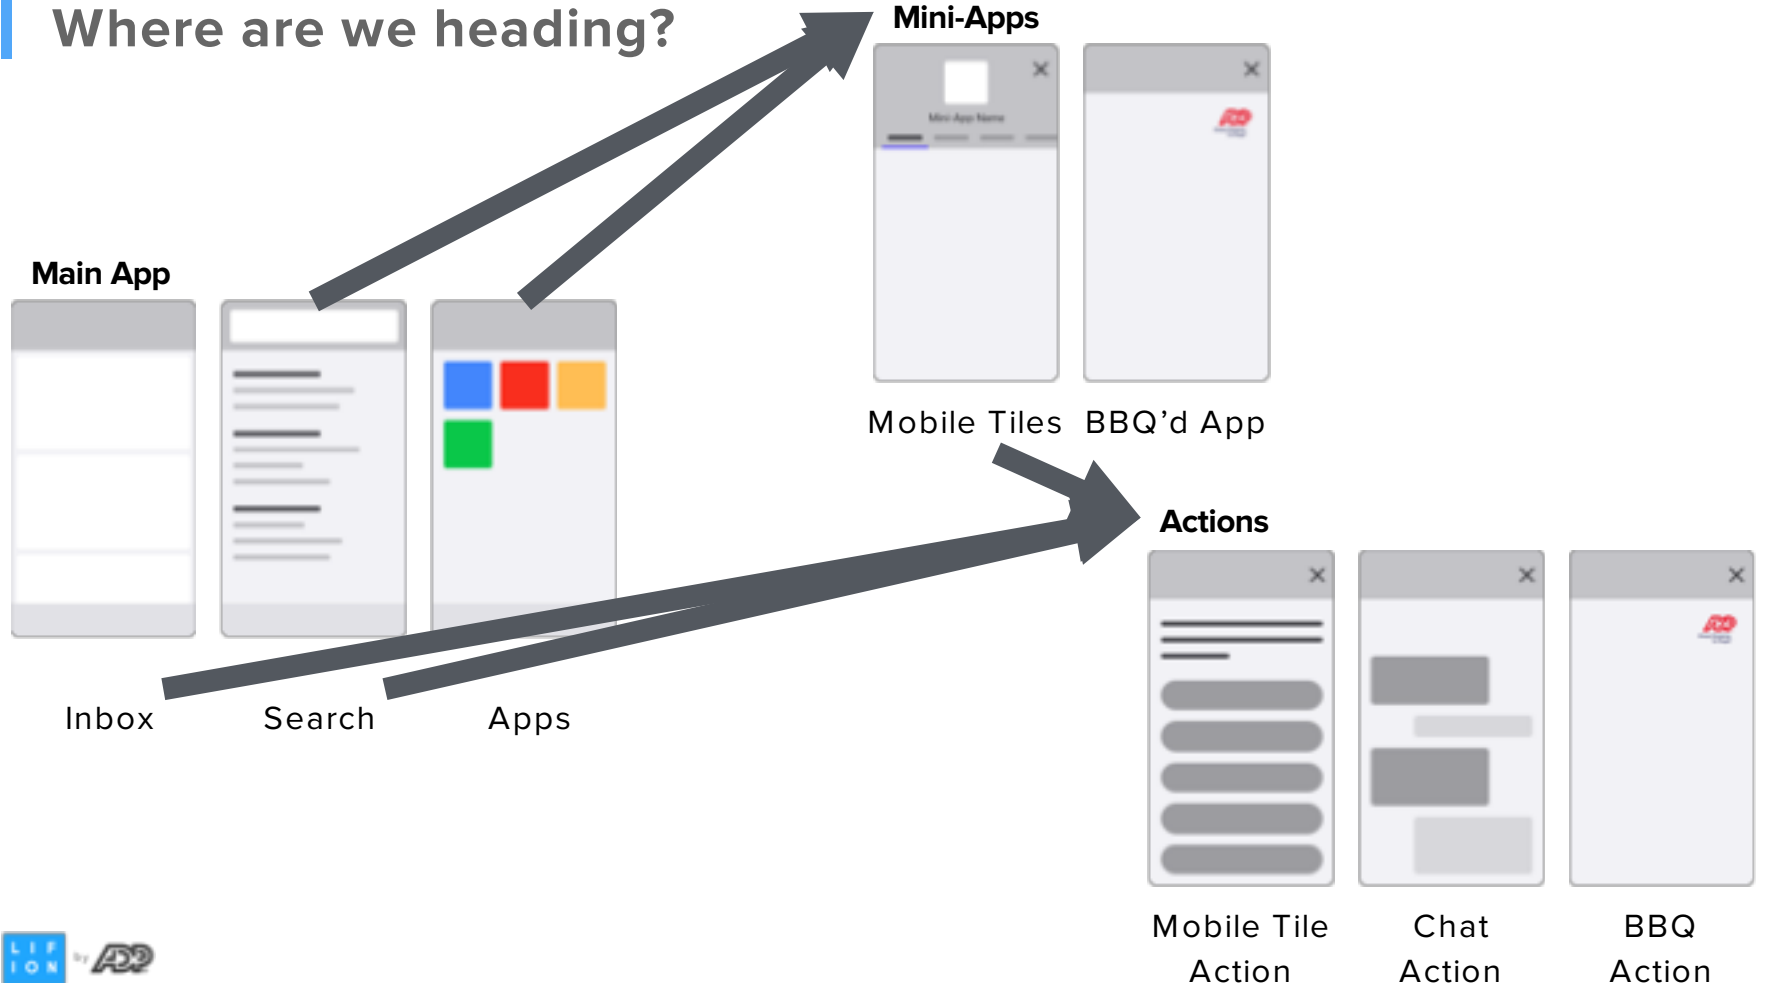

Where are we now?

Where are we now?

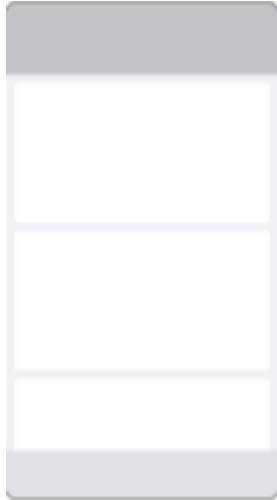

Where are we heading?

Where are we heading?

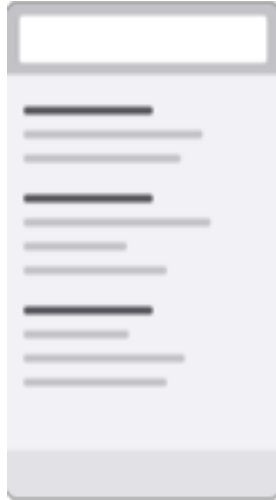

The Pieces

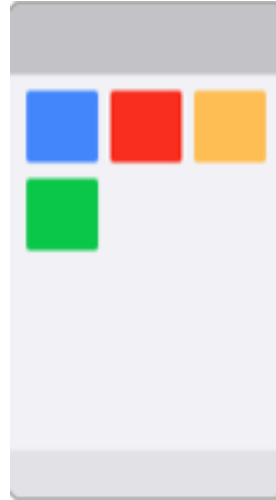

The Native App

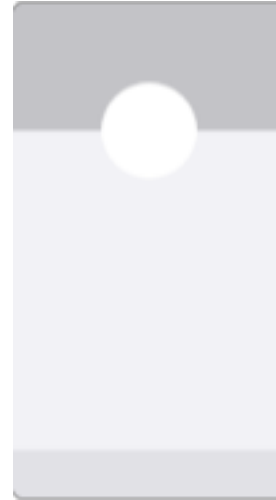

Inbox

Search

Apps

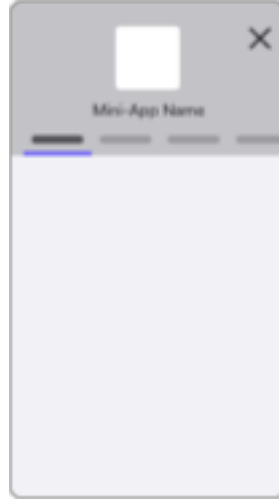

Profile

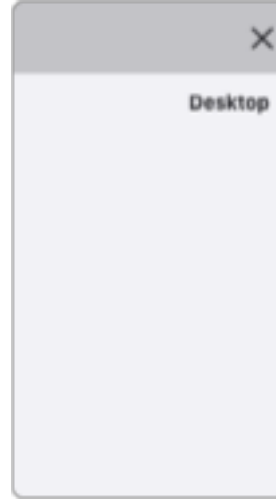

Apps

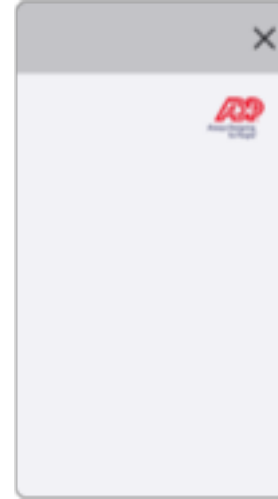

One-off Native
Apps (Teams,
etc.)

Mobile Tile
Mini App

Responsive
Desktop Tile

BBQ'd App

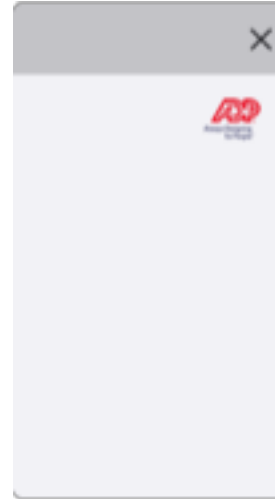

Actions

Mobile Tile
Action

Chat Action

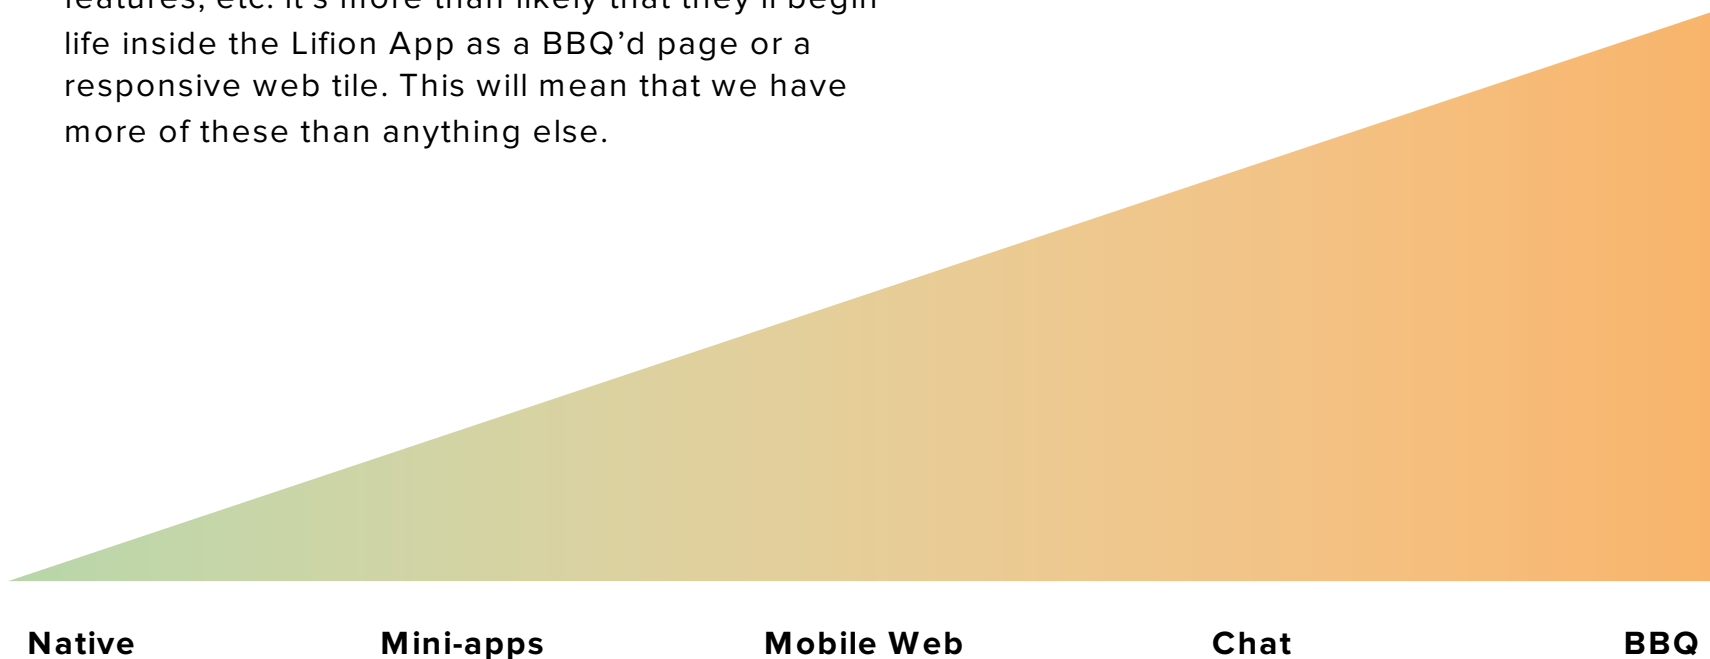

BBQ Action

The right tool for the right job

Mostly BBQ and responsive web tiles to begin with

As requests come in from clients for apps, features, etc. it's more than likely that they'll begin life inside the Lifion App as a BBQ'd page or a responsive web tile. This will mean that we have more of these than anything else.

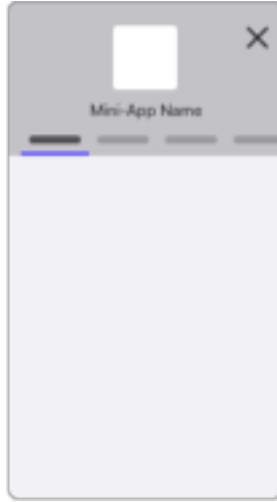

Amount

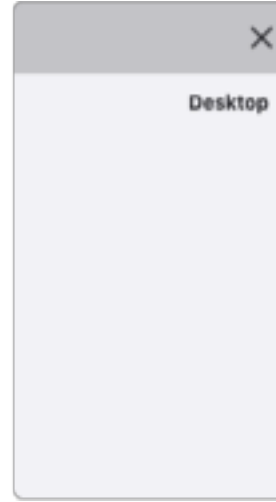

“Scale of UX quality”

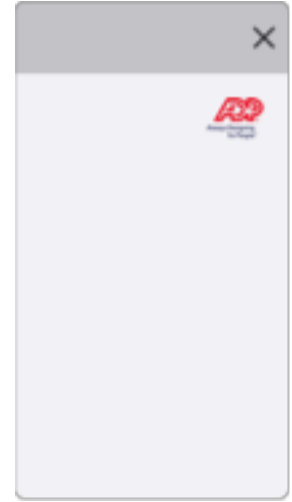

One-off apps
(Teams, etc.)

Mobile Tile
Mini App

Responsive
Desktop Tile

BBQ'd App

Slow to build /
better UX

Fast to build /
poor UX

As apps, actions, etc. are used more, we build more natively
